Efraim Grebnev

Redmond, WA | U.S. citizen | U.S. Navy veteran | +1 (425) 394-8839
efraimgrebnevp@gmail.com | efraim.grebnev.org | LinkedIn | GitHub

Education

Touro University Berlin | Expected July 2028

Bachelor of Applied Science, Cybersecurity and Network Administration | Full-time student

Software engineering experience

Associate Engineer | NoteCat | Remote | March 2026 - Present

- Designed and implemented autoscaling and failover for self-hosted transcription, integrating health checks, worker readiness, routing and recovery with TypeScript, BullMQ, Redis and PostgreSQL.
- Developed an OpenAPI-documented REST API for recordings, transcripts, settings and usage, plus webhook management with delivery retries, signing-secret rotation and endpoint verification.
- Implemented permission-aware search across server recordings using PostgreSQL/pgvector, semantic and keyword retrieval, cited answers and invalidation when source recordings change or are deleted.
- Built resumable indexing batches with token budgets and pause/retry controls. Added 114 focused tests covering search permissions, queue behavior and administrative access; live rollout remains pending.

Selected software projects

GrebKey | Completed software licensing project

- Built a React dashboard and Cloudflare Workers API for software licensing, with GitHub authentication and Stripe billing. Created Node.js and Python SDKs, backed by unit and browser tests.

Wedding Photo Drop-Off | Private event media sharing

- Built and deployed a private photo-upload workflow with access controls, upload validation and Turnstile. Used React, TypeScript, Cloudflare Workers, D1 and R2 for the interface, API and storage.

DeejWails **| Desktop hardware control**

- Designed a Go/Wails and React application that communicates with hardware over serial using a versioned binary protocol.

Military and additional experience

Control Systems Technician, E-5 | U.S. Navy, USS America | April 2019 - November 2024

- Served more than five years overseas, operating and maintaining shipboard control systems. Led 13 personnel and organized over 600 hours of technical and safety training. Previously held a Secret clearance.

Power Plant Operating Engineer I | University of Washington | March 2025 - August 2025

- Operated and troubleshot steam and chilled-water systems serving more than 200 campus buildings in a safety-critical environment.

Technical skills

Languages: TypeScript, Go, Python, C#, Lua

Frameworks and infrastructure: React, REST APIs, PostgreSQL, Redis, BullMQ, Cloudflare Workers, Docker, Linux

Testing and delivery: Vitest, Playwright, GitHub Actions, Git, CI/CD
